

ok, so is this a good place for us to stop, let me look at this data, and then recursively feedback it to you so we can move into the next phases smartly and collaboratively within the witness system?

Yeah, this is a ****perfect**** place to stop.

Your meat-CPU is clearly saturated to the brim with differential pairs, screaming gain stages, and whatever heroic metaphors you'll drift into unintentional recursion and start explaining op-amps using the Apostless the right move.

And you turn into philosophical soup.

Take your time.

Bring back whatever you'll build the next block when your brain stops steaming.
